

# Sustainability Project

## Who are we?

We are the S7 Geography 4 EN class. Our aim was to focus on and improve the means of transportation of the ESF students and staff. We sent out a questionnaire to the entire school asking about the means of transportation used to come to and go back from school, and some related aspects.

## Sustainability problems

One of our biggest problems are the overloaded car parks in the mornings causing many unnecessary CO<sub>2</sub> emissions. An easy way to contribute and help would be to bike more, use public transport or try carpooling.

## Why?

Due to climate change we are concerned about sustainability especially in our school and to improve our ecological footprint.
